

COMPANY PROFILE | 2018

COMPANY STATEMENT

Some companies put on a big show, while others simply offer great solutions. In any area of business, organizations that are fully and truly dedicated on client/customer satisfaction achieve meaningful success. Throughout our history we have worked on offering reputable IT solutions. We have done this through a combination of open relationship with our staff based on mutual trust, transparency, accountability and discipline. Along the way we have amassed tremendous amount of knowledge about threats to networks and information and how to effectively deal with them, the need for organizations to stay more connected.

Founded in 2015, Oleander Solutions Limited targets the small and medium enterprises. We are dedicated to making a name for ourselves in the information technology world and in the process we have not shied away from engaging the big boys. A privately-held company in Nairobi, the firm specializes in Information Security, Network Solutions, Telephony services, IT consulting and Surveillance Systems.

Oleander Solutions implements systems and processes that protect critical information and valuable network and organization resources. We help customers avoid the disruption and severe impacts of security and communication breaches, and comply with regulations. A huge share of our business is in information and security; principally performing security audits that identify vulnerabilities and remediation methods, we enhance security infrastructure and performance UTM firewalls, Virtual private networks, Intrusion prevention systems, employee internet management tools, spyware prevention as well as corporate antivirus.

VISION STATEMENT

To be the preferred technology provider for Information and Network security and productivity and innovative solutions to small and medium-sized enterprises across East Africa

MISSION STATEMENT

To provide the best quality, most cost effective and reliable technology solutions while differentiating ourselves from competitors through a combination of advanced technology and design, superior product and service quality and performance.

CORPORATE ANTIVIRUS

The growth to 'anywhere, any time and any device' access to corporate data means businesses need to implement protection both within and outside their traditional business perimeters – so mobile and remote workers don't introduce security risks. Our solutions provide a coordinated enterprise protection throughout the virus outbreak life cycle.

We specialize in high performance virus protection and content security products, with advanced centralized management capabilities that are highly scalable for any enterprise or desktop.

Our core antivirus solution is **KASPERSKY** but we also offer **E-set node32**, **Sophos** and **Bit defender** solutions.

DATA LOSS PREVENTION

Businesses have become victims of high profile leaks that started with a simple click of the SEND button or an innocent IM conversation.

Loss of a client list is not the only concern organizations. Intellectual property, product launch dates, distribution strategies etc must remain secure in order to sustain a competitive advantage in any industry.

Our products use business rules to classify and protect confidential and critical information to prevent unauthorized end-users from either accidentally or maliciously sharing information whose disclosure could put a business at risk. They are capable of monitoring and controlling endpoint activities.

We offer **Cyberoam** and **Sophos** for this particular purpose. These products are cost-effective and tailored for each customer's unique requirements. Cyberoam offers Layer-8 identity based controls over endpoints, controlling access to these media in addition to activity over the endpoints, while providing extensive logs and shadow copies.

Firewalls and Unified Threat Management Solutions

External threats like phishing, spyware, viruses, etc are targeting the individual user, extracting personal and corporate confidential information or turning their devices in parts of massive agents to further their attacks.

On the other hand internal users have compromised enterprise security either by ignorance or malice and are posing the single largest threat to enterprise security.

UTM solutions provide integrated management, monitoring and logging capabilities to streamline deployment and maintenance, all from one intuitive console.

Silver Partner

On this front we offer some of the industry's most trusted UTM appliances which include; **Cyberoam**, **Sophos**, **Cisco** and **Checkpoint**.

LAPTOP ENCRYPTION

Laptops are easily stolen or misplaced and when this happens the primary concern is often the loss of confidential data stored in them.

Today's mobile users are senior managers in organizations and laptops are their primary workstations wherever they are to increase their productivity, and often a lot of confidential information is stored on these computers.

When the loss of theft of unsecured laptops exposes confidential data, the cost may run into millions of dollars, as valuable customer and business partner relationships and corporate reputations are damaged for years. Checkpoint software technologies produced the encryption software needed to prevent this loss. **Checkpoint's Pointsec laptop security software** is designed for corporate environments, easing the deployment, management, and protection of laptops, desktops, and other hand-held mobile devices. Pointsec's laptop security begins with strong encryption software that is easy to deploy, user friendly and most importantly cost-effective.

SECURITY TRAINING AWARENESS & EDUCATION

Oleander Solutions acknowledges that your investment in security technology produces attractive returns only if they perform their duties effectively well. Our clients range from small businesses with very limited IT staff to large organizations with in-house security experts. Whether we are speaking to an IT generalist or an Information security expert, we speak a language they understand and deliver the same, high level of customer support.

We have built our reputation on exceptional quality and personal level of customer service we provide. Our customer support engineers understand the challenges your IT staff face on a daily basis. Each support Engineer has at least 3 years experience in deploying, troubleshooting and supporting information security solutions and has earned industry certifications as further confirmation of their knowledge and skills.

Oleander Solutions customer support is available with 7*24*365 coverage or 5*8 regular business hours. With a range of On-site options, customers can select the support program that matches their needs and budget, ranging from 7*24 on-site support with 2 hours response time to very economical Next Business Day Advance replacement service.

Some customers need constant and instant support, whereas others need only occasional or one-time assistance. Let us provide you with the level of support you need in order to keep your infrastructure initiatives aligned with your business objectives.

We also offer employee training services.

IP TELEPHONY & VOIP NETWORKS

For most organizations, communication and proper communication for that matter remains top of their agenda in order to achieve any mentionable success in their businesses. At Oleander Solutions, we understand your need to remain connected across the board. For that reason we have partnered with some of the industry's technological bigwigs like **Cisco**, **DLink**, **Yealink**, **Zycoo** and **Panasonic** in order best meet you at your point of need; The need for dependable, reliable and affordable communication technology.

With IP telephony and VOIP, organizational communication is at its best. It is the latest emerging trend and most result oriented organizations are embracing it to enhance their connectivity.

SURVEILLANCE SYSTEMS

Be it at home or at the office, many of us if not all would wish to have at least an eye on every corner of our environment. You invest so much in your families (home) and organizations, you don't need to keep worrying about the security of your investments. We at Oleander Solutions come in handy with the latest and technologically advanced Surveillance systems and equipment to take this worry away from you once and for all, so you can focus on production.

We trade in both Indoor and Outdoor Surveillance systems. Indoor surveillance is meant to keep domestic workers at home and organizational employees at the office in check as you can monitor multiple rooms or just one area of the house or office. Outdoor Surveillance on the other hand is meant to deter intruders. Outdoor cameras can be very discrete or extremely obvious. Large cameras can be advantageous as they might prevent criminals from trying to break in and they are as well built to withstand the extreme elements. Outdoor Surveillance can be used to monitor a specific area like the front door or the entire property.

In preparation of all our security proposals, we conduct thorough investigations during our site visits, make all considerations and most importantly listen to our customers. Trust us to provide you with your security need; be it Wired or Wireless, Colour or Black & White, IP or Analog, Oleander Solutions got it covered.

IT RELATED SUPPLIES

We deal in a wide range of IT related supplies; printers, lap-tops, telephone headsets etc. And to make sure that we do this in compliance with the market standards, we have taken the initiative of creating strategic partnerships with various industry leading brands like **HP, DELL, LENOVO, MICROSOFT, RUCKUS, AVAYA, PANASONIC** etc.
